

1 **50304/PYI/C1022**

ABSTRACT OF THE DISCLOSURE

5 A power control center with an enclosure has multiple
line voltage receptacles and a low voltage receptacle mounted
thereon. Voltage supplied by the low voltage receptacle is
lower than the voltage supplied by the line voltage
receptacle. Voltage supplied by the line voltage receptacles
10 corresponds to voltage remotely supplied to the power control
center. One of the line voltage receptacles is controlled by
a digital timer and the low voltage receptacle is controlled
by another digital timer. Both digital timers are mounted on
the enclosure. A cover is connected to the enclosure to
15 encase the line, low voltage receptacles and digital timers.
